Education

Master's in Data science

2024 - 2026

University of Houston, Houston, Texas, United States of America

Bachelor of Technology in Electronics and communication Engineering

2018 - 2022

Vellore Institute of Technology AP (VIT-AP) University, Amaravati, India

Relevant Coursework: Applied Statistics, Problem-solving using Java, Data structures and Algorithms

Skills

Programming Languages: Python, SQL, Java, R

Data Analysis and Visualization: Tableau, Power BI, Excel

Databases: MySQL, SQL Server, Oracle, Snowflake

Cloud Technologies: AWS (S3, EC2, IAM, RDS), Azure

Machine Learning: Regression, Classification, Clustering, Decision Trees, NLP

Professional Experience

Hewlett Packard Enterprise, Bangalore, India

September 2022 – August 2024

Service Information Developer – Full-time

- Analyzed and processed 1TB+ data for international telecom providers, optimizing operational workflows.
- Designed SQL scripts to automate data processing tasks, reducing manual intervention by 30%.
- Authored and maintained technical documentation for internal teams and clients, improving onboarding efficiency by 20%
- Developed web services using Advanced Java, enhancing system reliability and scalability.

Wipro, Bangalore, India

February 2022 – June 2022

Trainee – Internship

- Worked on the Cyber Risk and Security Data Center project, focusing on system and Linux administration.
- Earned Microsoft Azure Fundamentals Certification by demonstrating expertise in cloud concepts and core Azure services.

Project Experience

Project On Detection of Credit Card Fraud

- The idea is to identify fraudulent from non-fraudulent transactions by looking at a customer's typical spending pattern and pinpointing the location of those expenditures. Using the concepts of Machine Learning, R and python.
- For this project, the customer's recent transactions can be imported as a dataset into R or Python and then utilized to inform decision trees, artificial neural networks, and logistic regression. The incorporation of more data would improve the system's overall accuracy.

Bookstore Project

- Book Store project using Maven and SOAP UI involves building a web service for managing book information and using SOAP UI for testing
- Integrated a relational database with seamless CRUD operations, ensuring efficient data handling.

Irrigation System Using Soil Moisture Sensor (Team Lead)

- Built a smart irrigation system using IoT devices to monitor soil moisture and automate water distribution.
- Reduced water usage by 25% and increased crop yield through real-time data collection and analysis.
